

GETTING STARTED

Panic Pendant

The Panic Pendant allows you to always keep the line of safety open. You can be sure you'll get the assistance you need if anything arises.

It is important that you only press the button on the Panic Pendant in the event of an actual emergency, as it is always active. By default, pressing and holding the button for a second will dispatch the police. If you wish to change the default to a medical alert responder, contact Customer Support.

The Panic Pendant features a specially designed recessed button to prevent accidentally setting off an alarm.

Press and hold the button for 1-2 seconds in order for a signal to be sent.

.....

Do Not: Press the button on the Panic Pendant unless you are experiencing an actual emergency. The device is always active and will trigger an alarm even if your system is disarmed.
